- Implementing the node-red in IBM cloud.

- Designing the node-red work flow for our project.

- Launch the cloudant DB and create a database to store the location data.

The screenshot shows the IBM Cloudant Databases interface. On the left is a dark sidebar with navigation links: Monitoring, Databases, Replication, Active Tasks, Account, Support, and Documentation. The main area is titled 'Databases' and contains a table of existing databases. The table has columns for Name, Size, # of Docs, Partitioned, and Actions. Three databases are listed: 'child_location' (0 bytes, 0 docs, partitioned), 'noderedrvwbe20221105' (30.4 KB, 4 docs, not partitioned), and 'sample' (0 bytes, 0 docs, partitioned). Each database has three action icons: a blue square with a white plus and minus, a blue square with a white lock, and a blue square with a white trash can. At the bottom right, it says 'Showing 1-3 of 3 databases. Databases per page 20' with a dropdown arrow and a page number '1' with left and right arrows.

Name	Size	# of Docs	Partitioned	Actions
child_location	0 bytes	0	Yes	  
noderedrvwbe20221105	30.4 KB	4	No	  
sample	0 bytes	0	Yes	  

- For our project we are creating a database called child_loaction.

This is a partial screenshot of the IBM Cloudant Databases page, showing only the first row of the database list. The row is for the 'child_location' database, which has a size of 0 bytes, 0 docs, and is partitioned. The action icons are visible on the right.

Name	Size	# of Docs	Partitioned	Actions
child_location	0 bytes	0	Yes	  

USN – 5 : Developing the Python code for connecting with IBM Watson IoT platform.
